

I'm sorry, but I don't have specific information about the village of Agatovo in Bulgaria. If you have any other questions or need assistance with a different topic, feel free to ask! I'm here to help.

Village Smartness Index

A village smartness index value of 0.0 indicates that the village has not yet implemented any measurable smart initiatives or technologies that contribute to its development. This could be attributed to a lack of data, resources, or strategic planning for smart village initiatives. Such a low index suggests that the village may be facing significant challenges in areas such as governance, economy, and infrastructure, which are essential for fostering innovation and improving the quality of life for its residents. Without any smart solutions in place, the village may struggle to attract investment or enhance its services, ultimately hindering its growth and resilience.

Indicator 1.1.1

Measures the availability and quality of digital network connections within a rural community.

0.0

A calculated smart village index indicator value of 0.0 signifies that the rural community in question has no measurable availability or quality of digital network connections. This could indicate a complete absence of digital infrastructure, such as high-speed internet or mobile connectivity, which are essential for accessing information and services. The zero value may also suggest a lack of data collection or reporting in this area, highlighting significant challenges in digital integration and technological advancement. Consequently, this community may face barriers to economic growth, social engagement, and overall quality of life improvements.

Indicator 1.1.2

Assesses traditional, non-digital means of connectivity (e.g., postal services, telephony) to gauge infrastructure inclusivity in areas with limited digital access.

0.0

A calculated smart village index indicator value of 0.0 signifies a complete absence of assessed connectivity and infrastructure inclusivity in the current location. This could indicate a lack of traditional, non-digital means of connectivity, such as postal services or telephony, which are essential for fostering communication and access to resources in areas with limited digital access. The zero value may also reflect insufficient data collection or reporting, highlighting a critical gap in understanding the community's connectivity landscape. This situation underscores the need for targeted interventions to enhance infrastructure and improve overall inclusivity.

Indicator 1.1.4

Examines the affordability and economic accessibility of internet services for rural residents, aiming to highlight potential barriers to digital engagement. [Internet café, libraries]

A calculated smart village index indicator value of 0.0 signifies a complete absence of the necessary components or conditions that contribute to the development of a smart village. This could indicate a lack of digital infrastructure, such as high-speed internet access, or insufficient engagement with innovative technologies. In this context, rural residents may face significant barriers to digital engagement,

including affordability and accessibility of internet services. The absence of resources like internet cafés or libraries further exacerbates this issue, limiting opportunities for residents to connect and engage with digital platforms, ultimately hindering their socio-economic development.

Indicator 2.1.1

This indicator measures the extent to which public transport services are available and accessible to rural populations, including frequency, coverage, and proximity of services. It reflects the inclusiveness and usability of the transport network in addressing mobility needs in sparsely populated areas.

A calculated smart village index indicator value of 0.0 signifies a complete absence of public transport services in the assessed area. This indicates that there are no available or accessible transport options for the rural population, which severely limits mobility and access to essential services. The lack of frequency, coverage, and proximity of transport services reflects a significant gap in the inclusiveness and usability of the transport network, ultimately hindering the community's ability to participate fully in social and economic activities. This situation underscores the critical need for improved transport solutions to enhance connectivity in sparsely populated regions.

Indicator 2.2.2

This indicator assesses the adoption and use of vehicles powered by low-carbon or renewable fuels, such as electric vehicles (EVs), plug-in hybrids, or vehicles running on biodiesel, in rural areas.

A smart village index indicator value of 0.0 signifies that there is no recorded adoption or use of vehicles powered by low-carbon or renewable fuels in the assessed area. This could indicate a lack of infrastructure, such as charging stations for electric vehicles, or limited awareness and availability of such vehicles among the residents. Additionally, it may reflect insufficient data collection efforts in the region, preventing a comprehensive understanding of the local transportation landscape. This absence of low-carbon vehicle usage highlights potential areas for development and investment to enhance sustainable mobility options in the village.

Indicator 3.2.1

Measures the spread of localized energy generation facilities, enhancing local energy resilience.

The calculated smart village index indicator value of 0.0 signifies a complete absence of localized energy generation facilities within the village, indicating a critical gap in energy resilience. This zero value suggests that the village lacks the necessary infrastructure or initiatives to harness renewable energy sources, which are essential for enhancing local energy security and sustainability. The absence of data may further exacerbate this situation, highlighting the need for comprehensive assessments and interventions to develop energy solutions tailored to the community's needs. Addressing this deficiency is crucial for fostering economic opportunities and improving the overall quality of life in the village.
