

Terzolas is a picturesque village located in the Trentino region of Italy, nestled in the Val di Non valley. Known for its stunning natural landscapes, it offers a blend of traditional Alpine architecture and rich cultural heritage, making it a charming destination for visitors seeking tranquility and outdoor activities.

Village Smartness Index

A village smartness index value of 0.01 indicates a very low level of smartness maturity within that specific village. This suggests that the village has minimal initiatives or services that leverage technology and innovation to enhance the quality of life for its residents. The index reflects a nascent stage of development, where there may be some awareness of the importance of smart transformation, but very few concrete actions or strategies have been implemented. The presence of a median value of 0.01 among other villages suggests that this village is at the lower end of the spectrum, indicating a need for targeted interventions to foster growth and development in smart services and infrastructure.

Indicator 1.1.1

Measures the availability and quality of digital network connections within a rural community.

2.0

A smart village index indicator value of 2.0 suggests a very low level of availability and quality of digital network connections within the rural community being assessed. This indicates that the village faces significant challenges in accessing reliable internet services, which are crucial for implementing smart technologies and enhancing overall quality of life. The low score may hinder opportunities for economic development, education, and healthcare services, ultimately affecting the community's ability to thrive in a digital age. Improving digital infrastructure is essential for fostering growth and connectivity in this area.

Indicator 1.1.2

Assesses traditional, non-digital means of connectivity (e.g., postal services, telephony) to gauge infrastructure inclusivity in areas with limited digital access.

0.0

A calculated smart village index indicator value of 0.0 signifies a complete absence of assessed connectivity and infrastructure inclusivity in the current location. This could indicate that traditional, non-digital means of connectivity, such as postal services and telephony, are either non-existent or severely underdeveloped. The lack of data may also contribute to this zero value, reflecting significant challenges in accessing essential services and information. Consequently, this location may face considerable barriers to economic opportunities and social engagement, highlighting the urgent need for infrastructural improvements.

Indicator 1.1.4

Examines the affordability and economic accessibility of internet services for rural residents, aiming to highlight potential barriers to digital engagement. [Internet café, libraries]

A calculated smart village index indicator value of 0.0 signifies that the village in question exhibits no measurable progress or development in the context of smart village initiatives. This could indicate a complete

absence of digital infrastructure, services, or engagement opportunities for residents. Factors contributing to this zero value may include a lack of access to affordable internet services, insufficient technological resources, and limited community initiatives aimed at fostering digital literacy. Consequently, residents may face significant barriers to digital engagement, further isolating them from the benefits of modern technology and information access. This situation underscores the urgent need for targeted interventions to enhance connectivity and promote digital inclusion in the community.

Indicator 2.1.1

This indicator measures the extent to which public transport services are available and accessible to rural populations, including frequency, coverage, and proximity of services. It reflects the inclusiveness and usability of the transport network in addressing mobility needs in sparsely populated areas.

A calculated smart village index indicator value of 0.0 signifies a complete absence of public transport services available and accessible to the rural population in the assessed area. This indicates that there are no transport options in terms of frequency, coverage, or proximity, severely limiting mobility for residents. Such a scenario reflects significant challenges in inclusiveness and usability of the transport network, which is crucial for connecting individuals to essential services, employment, and social opportunities in sparsely populated regions.

Indicator 2.2.2

This indicator assesses the adoption and use of vehicles powered by low-carbon or renewable fuels, such as electric vehicles (EVs), plug-in hybrids, or vehicles running on biodiesel, in rural areas.

A smart village index indicator value of 3.0 suggests a moderate level of adoption and use of low-carbon or renewable fuel vehicles in the current location. This indicates that while there is some engagement with sustainable transportation options, it is not yet widespread. The presence of electric vehicles or other alternative fuel vehicles may be limited, reflecting a nascent stage in the transition towards greener mobility solutions. This value highlights the potential for growth and improvement in sustainable transport initiatives within the community. Overall, it signifies an opportunity for further development in promoting eco-friendly transportation options.

Indicator 3.2.1

Measures the spread of localized energy generation facilities, enhancing local energy resilience.

The calculated smart village index indicator value of 0.0 signifies a complete absence of localized energy generation facilities within the village, indicating a critical gap in energy resilience. This zero value suggests that the village lacks the necessary infrastructure or initiatives to harness renewable energy sources, which are essential for enhancing local energy security and sustainability. The absence of data may further exacerbate this situation, highlighting the need for comprehensive assessments and interventions to develop energy solutions tailored to the community's needs. Addressing this deficiency is crucial for fostering economic opportunities and improving the overall quality of life in the village.
